Hornpout (bullhead)
Pumpkinseed sunfish
American eel

Physical Characteristics

Area - 87 acres

Maximum depth - 15 feet

Temperatures:

Surface - 74⁰F

14 feet - 71⁰F

Principal fisheries: Largemouth bass, chain pickerel

Weymouth Pond is a small shallow warmwater pond best suited for warmwater species. Chain pickerel and hornpout were the only sport fisheries when the pond was originally surveyed. That survey indicated that the pond was suitable for bass. Largemouth bass are now present and are the principal fishery.

The lack of cold water habitat precludes management for coldwater sport fish.

Surveyed - August, 1960

Revised - 2000
